Louisiana Clean Water State Revolving Program

I. INTRODUCTION

Louisiana's Intended Use Plan (IUP) for the Clean Water State Revolving Fund (CWSRF) is prepared in accordance with the provisions of the Clean Water Act (CWA). The IUP describes the intended uses of the funds available in the CWSRF loan program for State Fiscal Year (SFY) 2011 and it details how the CWSRF program intends to commit available funds. This IUP is submitted as part of Louisiana's application for the capitalization grant under the Federal Fiscal Year (FFY) 2010 Appropriations Act.

The Louisiana Department of Environmental Quality (LDEQ) administers the CWSRF program in accordance with Section 606(c) of the CWA and La RS 30:2078.

The IUP also includes a Project Priority List (Exhibit 1) which rates and ranks projects in accordance with LAC 33, Part IX, Chapter 21 and specific provisions found in this IUP. An U. S. Environmental Protection Agency (EPA) approved priority ranking process provides a means to determine the amount and type of loans made each year and facilitates the LDEQ compliance with federally mandated requirements.

II. PROJECTS AND AVAILABLE ASSISTANCE

The Sources and Uses of Funds to prepare this IUP are provided in Exhibit 2. The LDEQ estimates that the SFY 2011 Sources of Funds are in the amount of \$292,840,565 and Uses of Funds are in the amount of \$334,156,014.

This IUP contains:

- a list of projects the State anticipates to fund, and
- information on how the State plans to use the funds received from grants, state match and repayment from previously made loans.

Available revenues consist of the following:

- cash balance forwarded from the previous year,
- federal grants,
- state matching funds,
- interest earnings on loans,
- administrative fees,
- investments, and
- principal repayments.

The LDEQ plans to use the grant proceeds and cash available to provide below market rate loans on eligible projects. These funds will allow the LDEQ to assist in protecting human health and in improving water quality and economic viability of Louisiana's rivers, lakes and groundwater. Once all federal grant dollars have been drawn, projects will be covered using the LDEQ's cash reserve balance accumulated from interest earnings and principal repayments.

The CWSRF has provided financial assistance totaling \$537,243,683 as of June 30, 2010 (Exhibit 7). In SFY 2011, the CWSRF has tentatively allocated \$197,232,200 to 31 new projects. The municipalities slated to receive these funds are on the current CWSRF Project Priority List (Exhibit 1), and have either submitted or are in the process of preparing a Facility Plan required for participation in the program. The current Priority List has 202 projects totaling approximately \$1,652,868,147. These loans will initially be funded with a combination of federal grant funds and state-match (where required). Once federal grant funds are fully drawn, projects will then be funded with the LDEQ's cash reserve balance.

Louisiana Clean Water State Revolving Program

III. CWSRF GOALS

Louisiana is committed to supporting the three major objectives found in Title VI of the CWA; these are:

1. Construction of publicly owned treatment works (Section 212)
2. Implementing a management program (Section 319); and
3. Developing and implementing a conservation and management plan (Section 320).

A. Long Term Goals:

The CWSRF continues to maintain long-term goals to ensure it assists the State in meeting water quality goals and ensure the long-range integrity of the Fund.

1. Provide financial assistance to municipalities and other eligible recipients in pursuing statewide compliance with Federal and State water quality standards, assist borrowers in complying with the enforceable requirements of the CWA and to reach the goal of eliminating discharge of pollutants into the State's waters.
2. Promote expanded eligibility under Title VI of the CWA that allows financial assistance for additional project categories. These additional project categories include non-point sources, reconstruction of facilities, facilities needed to accommodate population growth, estuary, and groundwater-related needs.
3. Maintain the fiscal integrity of the CWSRF in perpetuity and assure continuous enhancements for future generations through periodic cash flow and capacity analysis, portfolio monitoring and appropriate fiscal and lending policy implementation.

B. Short Term Goals:

The LDEQ will pursue the following short-term goals in an effort to continually improve, expand and sustain the CWSRF program.

1. Promote and advance wastewater treatment facility improvements in order to meet the requirements of the CWA through compliance assistance.
2. Communicate the availability of the CWSRF Program by the LDEQ personnel through outreach to individual municipalities across the state of Louisiana, and participation in conferences or conventions, as well as promotion of the program via the LDEQ website.
3. Present CWSRF program information, stressing nonpoint source pollution control and the protection of estuaries at a minimum of two (2) conferences and conventions during the year. The LDEQ will provide marketing materials such as brochures and promotional items. The CWSRF staff will be available to present information about the CWSRF program and obtain contacts for future meetings with potential borrowers. These conference events target local municipalities and local police juries with publically owned wastewater treatment facilities. Additionally, during these conferences and conventions, the CWSRF staff will interact with representatives of the municipalities to discuss their respective needs.
4. Participate in the Louisiana Waste Water Joint Funding Committee (LWWJFC) – a joint effort between the Louisiana Community Development Block Grants, US Department of Agriculture, Louisiana Department of Health and Hospitals (Drinking Water State Revolving Fund), and the LDEQ. The mission of the LWWJFC is to assist applicants in

Louisiana Clean Water State Revolving Program

securing funding for water and wastewater projects. The committee members will:

- Review project information and determine which funding programs may provide assistance to the applicants.
 - Meet monthly throughout the year to review Intent-to-File applications.
5. Close at least 14 loans totaling more than \$65,000,000.
 6. Submit proposal to EPA Region 6 to offer financing for up to 30 years.
 7. Apply for the FFY 2010 and 2011 Capitalization Grants in SFY 2011.
 8. Solicit projects that address green infrastructure, water or energy efficiency improvements or other environmentally innovative activities as required by FFY 2010 appropriation.
 9. Issue a Revenue Bond to provide matching funds for Federal capitalization grants, as necessary.
 10. Provide subsidization to projects funded as required by FFY 2010 appropriation.

IV. CWSRF ACTIVITIES TO BE SUPPORTED

A. Eligible Categories of Costs to Receive Assistance

1. Construction of new wastewater facilities, or improvements to existing wastewater facilities, necessary to serve the population designated in the approved planning area for the municipality;
2. Implementation of approved nonpoint source management plans; and
3. Development and implementation of estuary conservation and management plans.

B. Types of Assistance

The LDEQ will provide loans to eligible projects as specified in Sections 212, 319 and 320 of the CWA.

C. CWSRF Loan Rate and Policies on Setting Terms for Assistance

The interest rate on loans made by the CWSRF for water quality improvement projects may be adjusted in accordance with current market rates and availability of funds.

1. The LDEQ reviews the prevailing market rates and the existing loan portfolio to determine an interest rate that allows the program to achieve a balance between the pace of the program and the perpetuity of the fund. In order to further assist communities and promote water initiatives, the rate for new loans made by the CWSRF is set at the Effective Yearly Rate of 0.95%, which consists of interest at the annual rate of 0.45% plus an annual administrative fee of 0.50%. This rate (set January 26, 2009) will remain in effect until changed by the LDEQ. The previous rate was 2.95%. The value of the rate reduction has significantly increased the pace of the CWSRF program and will ultimately result in the program dramatically reducing the un-liquidated obligations (ULOs).
2. The current repayment period is 20 years. During the 2010 Regular Louisiana

Louisiana Clean Water State Revolving Program

Legislative Session, existing statute was amended to allow the LDEQ CWSRF to extend the repayment period up to 30 years. As a result, the LDEQ will seek approval from EPA in SFY 2011 to offer a 30 year repayment period for eligible projects.

D. Communities Served By the Fund

The types of communities to be served are:

Any political subdivision, public trust, agency or commission of the state, or a private entity, to the extent permitted by the CWA or federal regulations.

E. Administrative Costs of the CWSRF

The LDEQ intends to use an amount equal to 4% of federal capitalization grant funds for administrative support. Additional monies for administrative costs of the CWSRF program will be generated from the LDEQ's 0.50% administrative fees charged on all loans or supplied by other state funds if available. The LDEQ's Administrative Fees Fund is held outside the CWSRF and as of June 30, 2010 had a balance of \$14,876,522. The LDEQ estimates that administration expenses in SFY 2011 will total \$1,198,990 (Exhibit 3). These expenses will be funded with undrawn federal grant dollars from the FFY 2006, FFY 2007, FFY 2008 and FFY 2009 grant allocation(s).

V. ASSURANCES AND SPECIFIC PROPOSALS

The LDEQ provides the necessary assurances and certifications as part of the Operating Agreement between the State of Louisiana and the EPA. This includes the requirements of the following sections of the law:

A. State Matching Funds 602(b)(2)

The State of Louisiana agrees to provide match monies in an amount equal to 20 percent of each grant payment. The State of Louisiana will fund the required State Match by using State General Fund appropriations, Capital Outlay appropriations, tobacco settlement funds and bond proceeds. The State will deposit sufficient cash match into the CWSRF to meet its proportionate share requirement prior to drawing federal funds in accordance with 40 CFR 35.3135(b)(1).

B. Environmental Reviews Requirements 602(a)

The State of Louisiana will conduct environmental reviews as specified in the Project Review Procedures of the Operating Agreement and 40 CFR 35.3140.

C. Binding Commitments 602(b)(3)

A binding commitment is defined as the execution of a contract called the Bond Purchase Agreement between the borrower and the LDEQ. The Bond Purchase Agreement sets out the terms of the bond that will be issued by the borrower and purchased by the LDEQ. The binding commitment is effective when the LDEQ and the borrower have signed the Bond Purchase Agreement. The Bond Purchase Agreement may be executed up to six months prior to the bond (loan) closing.

The State of Louisiana will enter into binding commitments for 120% of each quarterly payment within 1 year of receipt of that payment (Exhibit 4).

Louisiana Clean Water State Revolving Program

D. Expeditious and Timely Expenditures 602(b)(4)

The State of Louisiana will expend all funds in the CWSRF in a timely and expeditious manner as required by this section and acknowledged in the Operating Agreement between EPA and LDEQ.

E. First Use for Enforceable Requirements 602(b)(5)

The State of Louisiana confirms that any publicly owned treatment works (POTW) previously identified as part of the National Municipal Policy (NMP) universe are either in compliance, on an enforcement schedule, have an enforcement action filed, or have a funding commitment from a prior year. The Department has confirmed that all POTWs previously identified on the NMP List have been funded on previous IUPs hereby satisfying this requirement.

F. Compliance with Equivalency Requirements 602(b)(6)

The State of Louisiana agrees to meet the specific statutory requirements (Title II) for publicly owned wastewater treatment projects constructed in whole or in part before FFY 1995. Projects funded after FFY 1995 will meet applicable (non-Title II) equivalency requirements.

VI. CRITERIA AND METHOD FOR DISTRIBUTION OF FUNDS

The approach used to develop Louisiana's proposed distribution of its FFY 2011 CWSRF funds is as follows:

A. Type of Financial Assistance – State Revolving Fund

The staff of the Financial Services Division will perform a fiscal analysis to determine the amount of funding that will be available. Because of the sufficiency of loan repayments and the municipal bond market, financing is available for both large and small communities. The State's Project Priority List is utilized to obtain CWSRF funding. The Project Priority System (Attachment 1) will be revised to accommodate the demand and community needs in excess of the financial resources readily available to the program. The Project Priority List is subject to Federal approval. Future IUPs will incorporate any revisions to the Project Priority List with detailed explanations.

B. Sources of Funds

Sources of Funds Available for Loans and Administration – SFY 2011 (Exhibit 2) identifies Louisiana's total funding sources for SFY 2011. At the present time, LDEQ has accumulated \$292,840,565, of which, over 100% is currently allocated to projects. This amount includes federal capitalization grants, state matching funds, interest earnings and loan repayments.

The EPA Administrator, or his duly authorized representative, and the State of Louisiana shall jointly establish a schedule of payment under which the EPA Administrator, or his duly authorized representative, will pay to the State of Louisiana the amount of each grant to be made to the State under Title VI of the CWA. This schedule shall be based on the State's IUP under Section 606(c) of the CWA, except that:

- Such payments shall be made in quarterly installments, and

Louisiana Clean Water State Revolving Program

- Such payments shall be made as expeditiously as possible.

These payments shall be made by the EPA Administrator, or his duly authorized representative, to the State of Louisiana based upon disbursement schedules for all awarded Capitalization Grants.

C. Allocation of Funds Among Projects

1. Priority List and System

All projects scheduled for funding with Louisiana's CWSRF have been reviewed for consistency with appropriate plans developed and approved under Section 205(j), 208, 212, 303(e), 319 and 320 of the of the Clear Water Act, as amended. Evidence of this review and finding of consistency is documented in each CWSRF project file.

The State's Project Priority List (Exhibit 1) consists of a listing of all projects that have, or are expected to qualify for, and participate in the CWSRF program. These projects are ranked by staff in the Business and Community Outreach Division, given a priority rating, and then listed in alphabetical order on the current Project Priority List. Loans are approved from this list on a readiness to proceed basis. Should total actual project needs exceed CWSRF funds available, projects to be funded will be prioritized according to the Priority System. When needed, and with EPA approval, procedures will be established by the Department to sell bonds to expand the program to meet demand, or develop other procedures that are in the best interest of the Louisiana CWSRF program.

2. Disbursement Schedule

Louisiana's disbursement schedule is based on estimated project construction dates, projected EPA/Automated Clearinghouse payment schedule from current grants, anticipated allotments and cash balances available for these projects. Estimated quarterly grant draws are shown in SFY 2011 Estimated Uses of Funds (Exhibit 5).

A list of projects identified as fundable during the SFY 2011 can be found in Exhibit 1.

3. Bypass procedures

If a project's readiness to proceed status changes after it was placed on the Fundable List, the Business and Community Outreach Division reserves the right to put the project on hold. If a project is not ready to proceed, the Division will substitute another project on the Priority List.

Louisiana Clean Water State Revolving Program

VII. PUBLIC REVIEW AND COMMENT

A copy of the IUP was made available for public review and comment between October 6 and October 15, 2010 and written comments will be accepted until 3 pm, October 15, 2010.

PUBLIC NOTICE

Notice is hereby given that the Louisiana Department of Environmental Quality (LDEQ) is applying for approval of the Clean Water State Revolving Fund Program Intended Use Plan (IUP) from the U.S. Environmental Protection Agency. Copies of the IUP are available at www.deq.louisiana.gov/loanfund and click on *Intended Use Plan* or by contacting the department at degcwsrf@la.gov.

Interested parties may review the IUP and submit written comments to LDEQ Business and Community Outreach Division, Attn: IUP Comments, PO Box 4301, Baton Rouge, LA 70821-4301 or to degcwsrf@la.gov. Written comments will be received not later than 3:00 p.m. on October 15, 2010 after which time and date they will not be accepted.

VIII. RECORDS

The State of Louisiana will receive and review all project documents from assistance applicants. These documents, together with the State's review memos and checklists, will be filed in the official electronic project files maintained by the State. The project files and other CWSRF records located in the State offices shall be made available in accordance with public record laws and for EPA on-site visits scheduled as part of the annual review or audit of the CWSRF.

The State of Louisiana will retain the official project files and other CWSRF files in accordance with 40 CFR Part 31 and will otherwise arrange for the storage of files in accordance with Louisiana State Law and applicable Department Policy and Procedures.

IX. INTENDED USE PLAN AMENDMENT PROCEDURES

Revisions to this IUP that are determined material will require public notice and EPA notification and approval. Revisions to this IUP that are determined not to be material shall be made by the LDEQ with notification to EPA or through EPA's required annual reporting.

Louisiana Clean Water State Revolving Program

Attachment 1: LDEQ Clean Water State Revolving Fund Priority System

Clean Water State Revolving Fund Priority System

§2123. Introduction to the Clean Water State Revolving Fund Priority System

A. Introduction

1. On October 18, 1972, the Federal Water Pollution Control Act Amendments became Public Law 92-500. PL 92-500 was amended by PL 95-217, the Clean Water Act of 1977, PL 97-117, the Municipal Wastewater Treatment Construction Grant amendments of 1981, and most recently by PL 100-4, the Water Quality Act of 1987.

2. The primary aim of the Federal Act is to “restore and maintain the chemical, physical, and biological integrity of the nation's water.” The Federal Act emphasizes the national goal that, wherever possible, water quality is to be suitable for recreational contact and for protection and propagation of fish and wildlife. In addition, the Federal Act emphasized the special need for controlling or eliminating discharges of toxic pollutants, and that the goals of the Federal Act be met through the control of both point and nonpoint sources of pollution. A permit program has been established and geared to restricting pollutant discharges from point sources – that is, from factories, municipalities, and large agricultural operations where pollutants enter the nation's water through an outfall pipe, sewer, or other conduit. The permit program has been expanded to include pollutants entering the nation's water through nonpoint sources – that is, stormwater runoff from municipalities, factories, agricultural operations, and other sources that do not require NPDES permits.

3. The Water Quality Act of 1987 added Title VI to the Clean Water Act, which provides for a program of low interest loans. Section 603(c) of the Federal Act states that “The amounts of funds available to each State water pollution control revolving fund shall be used only for providing financial assistance (1) to any municipality, inter-municipal, interstate, or state agency for construction of publicly owned treatment works (as defined in Section 212 of this Act), (2) for the implementation of a management program established under section 319 of this Act, and (3) for development and implementation of a conservation and management plan under Section 320 of this Act.”

4. Section 603(g) of the Federal Act states that: “The State may provide financial assistance from its water pollution control revolving fund only with respect to a project for construction of a treatment works described in Subsection (c)(1) if such project is on the State's priority list under Section 216 of this Federal Act. Such assistance may be provided regardless of the rank of such project on such list.” Section 603(g) of the Federal Act does not require that projects for the implementation of a management program established under Section 319 of the Federal Act, and for development and implementation of a conservation and management plan under section 320 of the Federal Act must be on the State's priority list to receive financial assistance, however, such projects will be included on the priority list and assigned

Louisiana Clean Water State Revolving Program

priority ratings in accordance with LAC 33:IX.2123.C.7.

5. Section 603(c) of the Federal Act states that: "After providing for public comment and review, each State shall annually prepare a plan identifying the intended uses of the amounts available to its water pollution control revolving fund."

6. In implementing the requirements of the Federal Act, the department has derived the State of Louisiana CWSRF Priority System.

7. This system provides an orderly approach to preparing a priority list of publicly owned treatment works projects that meet the definition of section 212 of the Federal Act and provides for the selection of these and other eligible projects to be included on the Intended Use Plan (IUP) for each year.

B. List of Stream Subsegments and Subsegment Priority Numbers

1. The most effective use of water quality management assets in achieving state and national goals requires that management emphasis be directed at the most important problem areas first. The priority of management effort is intended to give more consideration to those areas where the most significant problems occur.

2. The state of Louisiana is divided into 12 water quality management basins which exhibit distinct hydrologic characteristics. Each designated basin is divided into stream segments and subsegments which exhibit common reactions to stresses, i.e., pollutants. The stream segmentation for Louisiana is contained in the state's areawide water quality management plans submitted under Section 208 of the Federal Act.

3. In order to provide the basis for directing the management effort for water quality, each stream subsegment is ranked according to its designated uses and the degree to which those designated uses are supported. The values from each of the category classifications, from Table B-1, are multiplied together to produce the stream subsegment priority number.

4. Information on designated uses and degree of support is taken from the latest approved Louisiana Water Quality Inventory: Integrated Report, which may be found on the department's website.

5. The stream priority list is used as the base for the later determination of the project priority ratings.

TABLE B-1
SUBSEGMENT PRIORITY RANKING MULTIPLIERS

Designated Uses	Multiplier
Shellfish Propagation	20
Sole Source Drinking Water Supply	15
Outstanding Natural Resource	10
Primary Contact Recreation	5
Secondary Contact Recreation	5

Louisiana Clean Water State Revolving Program

Fish and Wildlife Propagation	5
Agriculture	5
Degree of Support	Multiplier
Not Supported	5
Partially Supported	4
Fully Supported but Threatened	3
Fully Supported	2

Formula:

$$\text{Designated Uses} \times \text{Degree of Support} = \text{Stream Subsegment Priority Number}$$

C. List by Priority Rank

1. In conjunction with the priority of the stream subsegments of the state of Louisiana, each municipality that has requested consideration for funding is rated as to its ability to comply with the Federal Act. This rating of municipalities forms an important water quality management tool.

2. The priority rating for each municipality considered is composed of two factors, the stream subsegment priority rating and the municipality factor. These two numbers are added together to form the basic project priority rating.

3. The municipality factor is the summation of two factors: the category factor and the pollution reduction factor. The category factor depends on the age of a particular treatment system within a project area. Depending on the type of the system whether it is a treatment or collection, the factor can be obtained from Tables C-1 or C-2.

Table C-1

Age of treatment plant Type of treatment plant	0 to 5 years	6 to 10 years	11 to 15 years	16 to 20 years	Over 20 years
Mechanical plant	2	4	6	8	10
Aerated lagoon	1	2	4	5	7
Stabilization pond	0	1	2	3	4
Other	0	0	1	1	2

Those projects with an existing collection system in need of rehabilitation or I/I correction will be awarded points from the Table C-2 based on the age of the collection system.

Table C-2

Louisiana Clean Water State Revolving Program

Age of collection	Point
0 - 10 years	2
11 - 20 years	4
21 - 30 years	6
31 - 40 years	8
Over 40 years	10

The Category Factor is the higher of the two values from Tables C-1 and C-2 and will be used calculating the municipality factor. The Pollution Reduction Factor is an indication of the ability to reduce the pollution discharged into the receiving waters, and it obtained from Table C-3.

Table C-3

FUTURE LEVEL OF TREATMENT	SECONDARY	ADVANCED (BOD<20)	ADVANCED (20>BOD<10)	ADVANCED (BOD<10)
PRESENT TREATMENT LEVEL				
Raw (from existing outfall)	80	90	90	100
Less than Secondary	60	70	80	90
Secondary	20*	60	70	80
Advanced (BOD<20)	NA	20*	60	70
Advanced (20>BOD<10)	NA	NA	20*	60
Advanced (BOD<10)	NA	NA	NA	20*
Unsewered (no outfall)	30	40	50	60
N/A - Rehabilitation and/or I/I correction only				40
N/A- No reduction in pollution discharge anticipated				20

* If no change to treatment but increase capacity, change 20 to 40

Formula:

$$\text{Category Factor} + \text{Pollution Reduction Factor} = \text{Municipality Factor}$$

4. A separate municipality factor shall be determined for each treatment facility and the collection system within its service area. When two or more treatment facilities will be included in a single project, regardless of whether they are in the same or different municipalities, the municipality factor for the project will be the weighted average, weighted on population served, of the municipality factors for all treatment facilities included in the project. For wastewater projects: Basic Project Priority Rating = Stream Subsegment Priority Rating + Municipality Factor.

5. The priority rating for a municipality may be re-evaluated and adjusted

Louisiana Clean Water State Revolving Program

whenever new information is made available. Such information may result from facilities planning, water quality analysis, etc.

6. Any municipality may request a reevaluation of its priority rating. Any such requests should include the reasons that the municipality believes the priority rating to be in error.

7. Projects for the implementation of a management program established under Section 319 of the Federal Act, and for development and implementation of a conservation and management plan under Section 320 of the Federal Act will be assigned a Stream Subsegment Priority Number based on the stream subsegment that will be most impacted by the project. These projects will also be assigned an additional factor based on the ability of the project to reduce pollution in receiving waters. Since such projects may take numerous forms, this factor will be assigned by the department based on evaluation of individual project applications and will not exceed 100 points. The Basic Priority Rating for projects under sections 319 and 320 of the Federal Act are as follows:

Basic Project Priority Rating = Stream Subsegment Priority Rating + Additional
Assigned Factor.

D. CWSRF Priority List

1. Upon receipt of a request by the authorized representative of a municipality or an applicant, the basic priority rating will be determined and the proposed project will be placed on the CWSRF Priority List.

2. Request for inclusion on the CWSRF Priority List must include the following:

- a. for public entities, a resolution from the governing authority designating a project representative and authorizing him/her to submit pre-application materials;
- b. a completed Form RF-100; and
- c. a map of the proposed planning area.

3. It is the responsibility of each authorized project representative to maintain current and accurate information for his/her project, and to submit any revised or updated project information to the department each year which will be used to prepare the CWSRF Priority List.

4. The loan amount shown on the list will be the estimated amount of those items that are eligible for loan assistance. Eligibility of specific items will be based on the latest federal requirements in effect at the time the list is prepared. Should these requirements be changed subsequent to preparation of the list, all projects on the list will be adjusted accordingly. The monetary amount of each item will be based on the latest information supplied by the authorized project representative in accordance with Paragraph 2 of this Section.

5. Projects normally proceed in three steps: Facility Planning, Design, and Construction.

Louisiana Clean Water State Revolving Program

It is intended that projects that have completed Facility Planning and Design and are ready to begin construction will be considered for funding before projects that are not ready to begin construction. Projects will be awarded points in addition to the basic priority rating based on the readiness to proceed to construction in accordance with the following milestone:

Milestone	Points
Project has completed Facility Planning and planning documents have been approved	1000
Project has completed design and plans and specifications have been approved	2000

6. Large projects may be offered assistance in several phases based on a request by the authorized project representative, on a comparison of project cost and funds available, or on other factors that may require delayed funding for portions of a project. Each phase of a project will be listed separately on the CWSRF Priority List. All phases will have the same basic priority rating but each phase will have its own points awarded based on readiness to proceed.

7. The CWSRF Priority List will include all projects that have requested funding assistance, ranked in priority order, regardless of the amount of funds available. The priority list will be used for the later preparation of the CWSRF IUP.

8. The CWSRF Priority List will be made available for review each year, not less than 30 days prior to submission to the EPA. Each municipality that has submitted pre-application materials will be notified by letter of the availability of the CWSRF Priority List. It is the responsibility of each potential borrower to examine all the information listed for his/her project for accuracy. Any errors or omissions should be reported to the department prior to the deadline for comments.

9. Any project or project phase will be removed from the CWSRF Priority List once funding for the project or project phase has been provided through the CWSRF; or when the project or project phase has been constructed using another source of funds.

10. Any project that has had no written communication with the department for a period of five years and has presented no other evidence of progress toward completion of items that are prerequisites to funding during the five year period shall be deemed to be an inactive project and may be removed from the CWSRF Priority List. Prior to removal of an inactive project from the CWSRF Priority List the department will contact the project representative in writing to inform them of the impending removal of the project.

E. Intended Use Plan

1. An IUP is prepared for each state fiscal year and details the intended uses of amounts expected to be available to the CWSRF during the year. These intended

Louisiana Clean Water State Revolving Program

uses will include loans for projects as well as other allowable uses of the Fund, including but not limited to repayment of bonds issued by the Fund, loan guarantees or insurance for local obligations, and payment of allowable costs of administering the Fund.

2. On July 1 of each year, the Administrative Authority or his designated representative will determine the amount expected to be available for loans for projects for the current state fiscal year.

3. Of the amount expected to be available in accordance with Paragraph 2 of this Section, certain amounts will be reserved in accordance with Section F.

4. Projects must be included on the current CWSRF Priority List that has met public participation requirements and has been submitted to the EPA in order to be selected for the IUP. Projects on the proposed CWSRF Priority List may be selected for the proposed IUP provided that both the proposed Priority List and IUP meet public participation requirements and are accepted by the EPA.

5. Projects on the CWSRF Priority List will be selected to receive funds from the amount expected to be available in accordance with Paragraph 2 of this Section, less any reserves established in accordance with Section F, by considering projects in several categories for funding. All projects in a high priority category will be funded before any projects in a lower priority category are funded. Within each category projects will be considered for funding in order of the priority ranking of the individual project. The several categories that are considered are as follows:

- a. Projects that meet specific requirements of federal law. Where federal law requires that a percentage of capitalization grant funds must be used to fund certain categories of projects, projects meeting those requirements will be funded ahead of other projects until the required percentage of funds has been satisfied.
- b. Projects which are required for completion of an ongoing project for which at least one phase has already received funding through the CWSRF program, and that will not result in an operable treatment system without the additional funds. To qualify as an ongoing project, the work for which additional funds are required must be specifically identified within the scope of work for the project for which a Facilities Plan has been approved by the department.
- c. All other projects that do not meet either of the above conditions.

6. Notwithstanding the provisions of paragraph 5 above, no project on the CWSRF Priority List will be placed on the IUP unless the municipality has submitted a Letter of Intent to the department stating the Municipality's intention to proceed with the project, and a project schedule that indicates that the Municipality will have completed all prerequisite program requirements and will be able to receive a loan during the fiscal year.

7. The CWSRF IUP is divided into two portions: a. the fundable portion and b. the planning portion. The fundable portion includes those projects expected to be awarded assistance during the fiscal year for which the list was prepared. The planning

Louisiana Clean Water State Revolving Program

portion includes those project steps expected to receive funding during the next four fiscal years after the fiscal year of the list, based on the best available information on funds expected to be available.

8. The CWSRF IUP will be made available for inspection at the same time as the CWSRF Priority List each year, but not less than 30 days prior to submission to the EPA. Each municipality or applicant that has submitted pre-application materials will be notified by letter of the availability of the IUP. It is the responsibility of each potential borrower to examine all the information listed for his/her project for accuracy. Any errors or omissions should be reported to the department prior to the deadline for comments. Applications for assistance which deviate substantially from the proposed project amount contained in the IUP might not be processed.

9. A project may be moved from the fundable portion of the list to the planning portion (bypassed) if it is determined that the project will not be ready to proceed during the funding year. Department staff will contact the project representative in writing to advise them of the impending bypass of the project and afford them an opportunity to present updated information that might avoid a bypass.

10. If cash flow of the program permits, either through project bypasses or the availability of additional federal capitalization funds, or if for any other reason it is determined by the department that additional funds are available for projects, projects from the planning portion of the list which are ready for funding and which have completed the priority list public participation requirements will be advanced to the fundable portion of the list. Individual projects will be advanced, in accordance with provisions of Paragraph 5 of this Section, until the available federal funding is consumed.

11. If insufficient projects meeting the criteria of Paragraph 6 of Section D for advancement from the planning to the fundable portion of the list are available to consume the additional funds, the department may prepare a revised list containing projects which have not met public hearing requirements; however, such projects will not be funded until public hearing requirements have been met.

12. If the actual amount available during the year is less than the projected amount expected to be available in accordance with Paragraph 2 above, and it is not possible to fund all projects on the fundable portion of the IUP, then, of the projects not yet funded, those projects selected last for inclusion on the IUP will be moved from the fundable portion to the planning portion until the remaining projects can be funded with the available funds.

13. If any project requests more funds than the amount listed on the IUP for that project, and granting the additional funds would result in insufficient funds for the remaining projects on the fundable portion, the additional funds will not be granted; but the project may request the additional funds be added to the fundable portion for the next fiscal year.

14. The CWSRF IUP will be submitted to the EPA for their review and acceptance as soon as possible after the public comment period has expired.

F. Reserves Related to the IUP

Louisiana Clean Water State Revolving Program

1. Reserves for State Management Assistance
 - a. The state may set aside a portion of the total funds available during the IUP year for use by the department in fulfilling its obligations to manage the CWSRF Program.
 - b. This reserve will be limited to the amount authorized by federal law as a percentage of each federal capitalization grant.
2. Reserve for loans for Facilities Planning and Design
 - a. The state may set aside a portion of the total funds available during the IUP year for loans to municipalities for Facilities Planning and Design.
 - b. This reserve is limited to municipalities that meet all of the following conditions:
 - i. The construction portion of the project must appear within the five year planning portion of the IUP.
 - ii. The loan is to perform facility planning or design work that has not been previously funded.
 - iii. The applicant does not have the financial capability to complete facility planning and design work without financial assistance.
 - c. This reserve will be implemented only to the extent that the state deems necessary to provide assistance to municipalities that would be unable to complete Facilities Planning and Design work without assistance and that are expected to receive assistance for construction when Facility Planning and Design work are completed. This reserve may not exceed ten percent of the funds available in accordance with Paragraph 2 of Section E.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2011(D)(1).
