

Addendum to ADVF Procedure for Hurricane Related ACWM For Residential Structures Only

Beginning on March 29, 2006, at 12:00pm, the following procedure has been implemented for all Hurricane related transportation and disposal of residential structures constructed of Asbestos Containing Waste Material (ACWM) requiring Asbestos Disposal Verification Forms (ADVFs).

An attached excel file contains two spreadsheets: One is a template form that will be used to accompany an ADVF for each major contractor and one is an example. The following procedure is to be used for the transportation and disposal of ACWM requiring ADVFs and will significantly reduce the number of ADVFs that are associated with project.

- A. For each day an ADVF is required, the Contractor will sign the Addendum certifying that the transporter information pertaining to this ADVF is true and correct.
 1. At the time of the first receiving load for the day, the landfill accepting ACWM will receive one original ADVF and the accompanying form, Addendum to ADVF for Transportation and Disposal of ACWM from each major contractor via the transporter.
 2. The driver will proceed to the asbestos disposal area and submit the major contractor they are working, their company name, truck number, and initial.
 3. Landfill personnel will verify that the truck is on the Addendum submitted by the major contractor and verify the yardage.
 4. Landfill personnel will enter the yardage by the respective truck every time the truck delivers a load for that day.
 5. The total yardage per truck and the total yardage per major contractor will be tallied per day.
 6. Landfill personnel will certify that the loads listed on the form were received and properly disposed.
 7. A hard copy will be retained by the Landfill and mailed to LDEQ and the major contractor within 30 days of receipt.

Initial Date of Implementation: March 29, 2006
(Revised: February 27, 2007)
