

What's New for the 2025 Reporting Year

Changes and Notifications

1. There have been no significant changes to ERIC since the last reporting period. Annual SCC and NAICs codes have been made.
2. Jacqueline "Jackie" Prudente is a new addition to the Emissions Inventory team at LDEQ. She will be taking over many of Maureen's previous responsibilities. With John Babin's retirement, Maureen has received a promotion and is now overseeing our non-point source emissions inventory work.
3. LDEQ will be launching an upgrade to the DEQ public website to meet federal Americans with Disabilities compliance requirements in February-March. This may change the look of the Emissions Inventory page, but the contents should stay the same.
4. The due date for mailing the **RY2025** inventory's certification statement is **Thursday, April 30, 2026**.

Reminders

1. Report Actual Emissions. Emissions Inventory is used to capture what happened for the year. Permitted emission limits are for capturing the worst case scenario.
2. Check the DEQ website for status updates/outage notices. Notices do not appear at the top of ERIC pages when logged into the reporting system. <https://deq.louisiana.gov/page/EmissionsInventory>
3. Any coordinate updates or facupdate@la.gov requests received after 4:00pm on **Thursday, April 30, 2026**, will not be processed until the next business day. Any inventories that cannot be submitted on time because of pending facupdate@la.gov and coordinate review/approval issues will be considered late.
4. Don't mail **copies** of the Certification Statement. We only need **one** original wet-ink signature Certification Statement.
5. Facility updates request form is available for quickest turnaround: <https://www.deq.louisiana.gov/form/eric-facupdate-request>
6. Requests for release are no longer needed. Facilities only need to report if they have a requirement during the calendar year. Once the requirement is fulfilled, there's no longer a need to request or be released in writing. See revision here: <https://www.deq.louisiana.gov/assets/docs/Air/EmissionsInventory/ERIC/LR919UpdateRedline.pdf>
